

Clinical Practice Support App for Autoimmune Disease Units (Apptoimmunes)

INVENTORS: Servei de Salut de les Illes Balears; Manaca SL

HIGHLIGHTS

- ✓ A tool for doctors against autoimmune diseases

TECH STATUS

- ✓ TRL9
- ✓ Intellectual property

Background and Technology

Doctors usually have to be aware of and memorise all diseases, which can be counterproductive in certain areas. In the field of autoimmune diseases, this tool has been created to improve patient care by providing classification criteria, activity scales, calculators and a small dictionary of autoantibodies. In addition, in the latest update, a treatment section has been added which includes the EULAR and ACR guidelines.

Applications

This app has not been developed with the intention of being commercialised, on the one hand because it is not sponsored or subsidised by the pharmaceutical industry, and on the other hand because the main objective from the outset has been to aid clinical practice for Autoimmune Disease Units.

Technology status

Intellectual property

Title: Clinical Practice Support App for Autoimmune Disease Units (Apptoimmunes)

Collaboration between two applicants: Servei de Salut de les Illes Balears and Manaca SL.

Market Opportunity

This application is already available for free download on the main mobile platforms (IOS and Android).
