Medir la expresión de proteínas en dos, o más, muestras y compararlas –
“**Comparative proteomics**”

- 1D gel electrophoresis (IEF - IPGphor3- or SDS PAGE - Ettan DALTSix & MiniVE Vertical Electroforesis System -)
- 2D gel electrophoresis (IPGphor3 + Ettan DALTSix)
- Fluorescence, Difference Gel Electrophoresis (DIGE, Typhoon FLA 9500)...
- Fluorescence IR (Odyssey[®] CLx)
- Gel & Membrane visualization (ImageQuant LAS 4000)
- Bioassays proprietary microsphere technology (MAGPIX[®] System - Luminex-)
- Plate, cuvette... reader (Synergy H1 Multi-Mode Reader - Bio-Tek -)
- LC-MS/MS using coded affinity tagging (ICAT, iTrac, SILAC..), ProteinChip Array (SELDI analysis), Antibody arrays

Ettan IPGphor3 (GE Healthcare)

Immobiline DryStrip)

The Principle of Isoelectric Focusing. A pH gradient is established in a gel before loading the sample. (A) The sample is loaded and voltage is applied. The proteins will migrate to their isoelectric pH, the location at which they have no net charge. (B) The proteins form bands that can be excised and used for further experimentation.

Electrophoresis (SDS PAGE)

MiniVE Vertical Electroforesis System (GE Healthcare)

Trans-Blot® Turbo™ Transfer Starter System (Bio-Rad)

Etan DALSix Large Vertical System (GE Healthcare)

Separation by Molecular Weight

Difference Gel Electrophoresis (DIGE)

- 1) Proteins are extracted from the cells or tissues of interest.
- 2) The protein extracts are labeled with different fluorescent dyes (Amersham CyDye DIGE Fluor Labeling Kit...):

- 3) The 2 extracts are mixed and then resolved by 2-D gel electrophoresis.

Dual Channel Imaging Technique (DIGE)

$\lambda E-Cy5$

$\lambda E-Cy3$

Excise spots; elute;
digest, extract peptides;
MS analyze, Protein
identification

Typhoon FLA 9500

Excitation wavelengths:

473 nm (blue LD laser)

532 nm (green SHG laser)

635 nm (red LD laser)

Dual Channel Imaging Technique (DIGE)

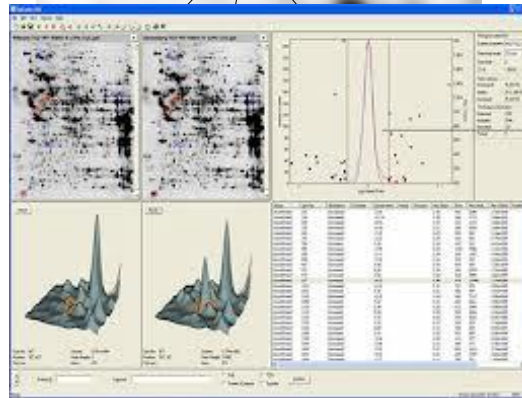

Human brain proteins

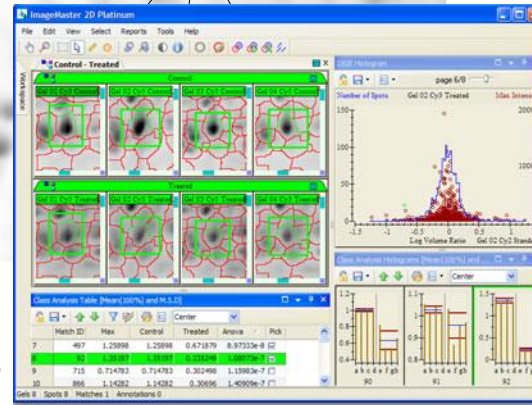

Differences in Expression Level in Thalamus

Control

Softwares: DeCyder 2D, Image Master 2D Platinum
 phosphoglycerate mutase phosphoglycerate mutase

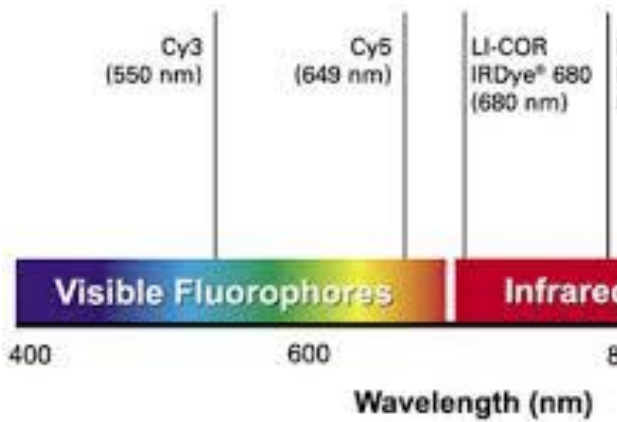

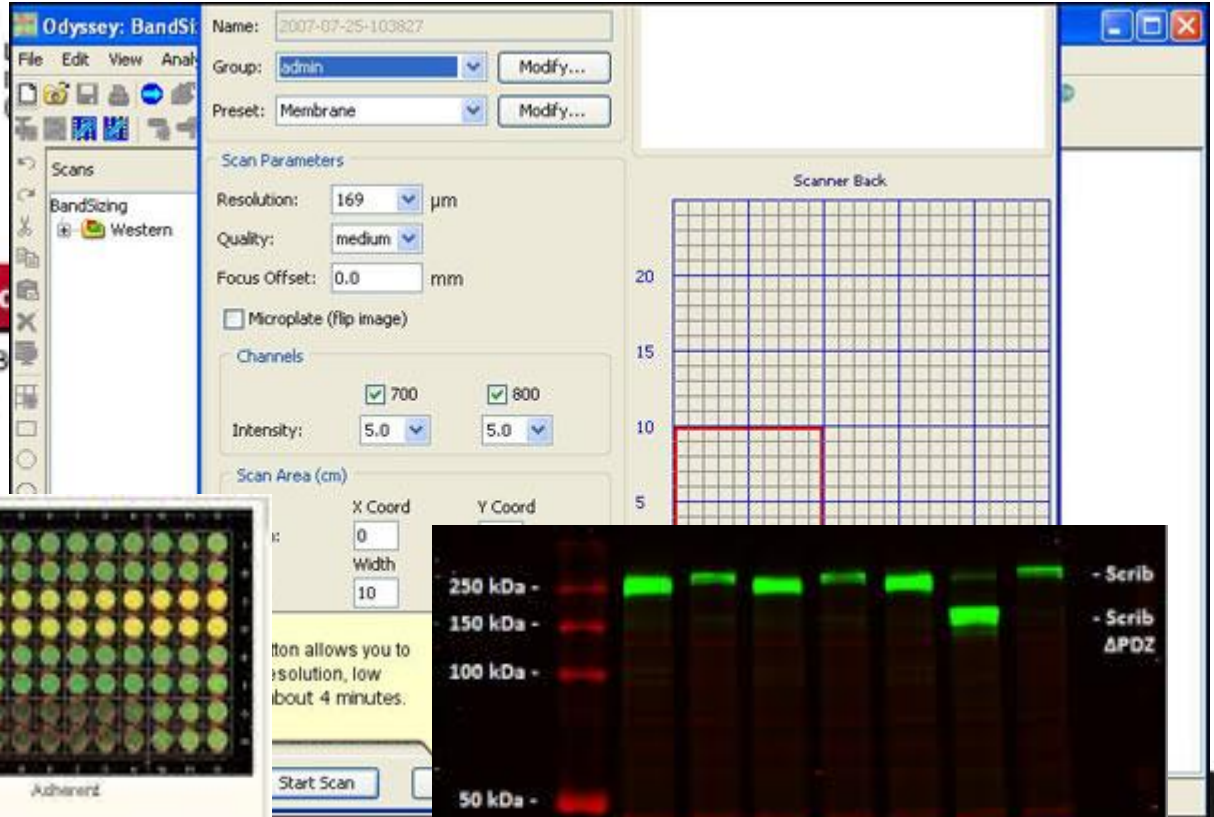

phosphoglycerate mutase

Odyssey[®] CLx Infrared Imaging System - LI-COR Biosciences

Odyssey: BandSi
 Name: 2007-07-25-103827
 Group: admin
 Preset: Membrane
 Resolution: 169 µm
 Quality: medium
 Focus Offset: 0.0 mm
 Channels: 700 800
 Intensity: 5.0 5.0
 Scan Area (cm): X Coord 0, Y Coord 10, Width 10

Receptor Expression (Odyssey)

ImageQuant LAS 4000 (GE Healthcare Life Sciences)

Digital imaging of protein
and nucleotides in gels and
membranes:

- Dark sample cabinet
- Camera system
- Filter wheel
- Light sources

ImageQuant LAS 4000 (GE Healthcare Life Sciences)

Software: Image Quant LAS 4000 v1.2

Select the option [1] for the tray position.

Light sources:

Chemiluminescence (ECL)

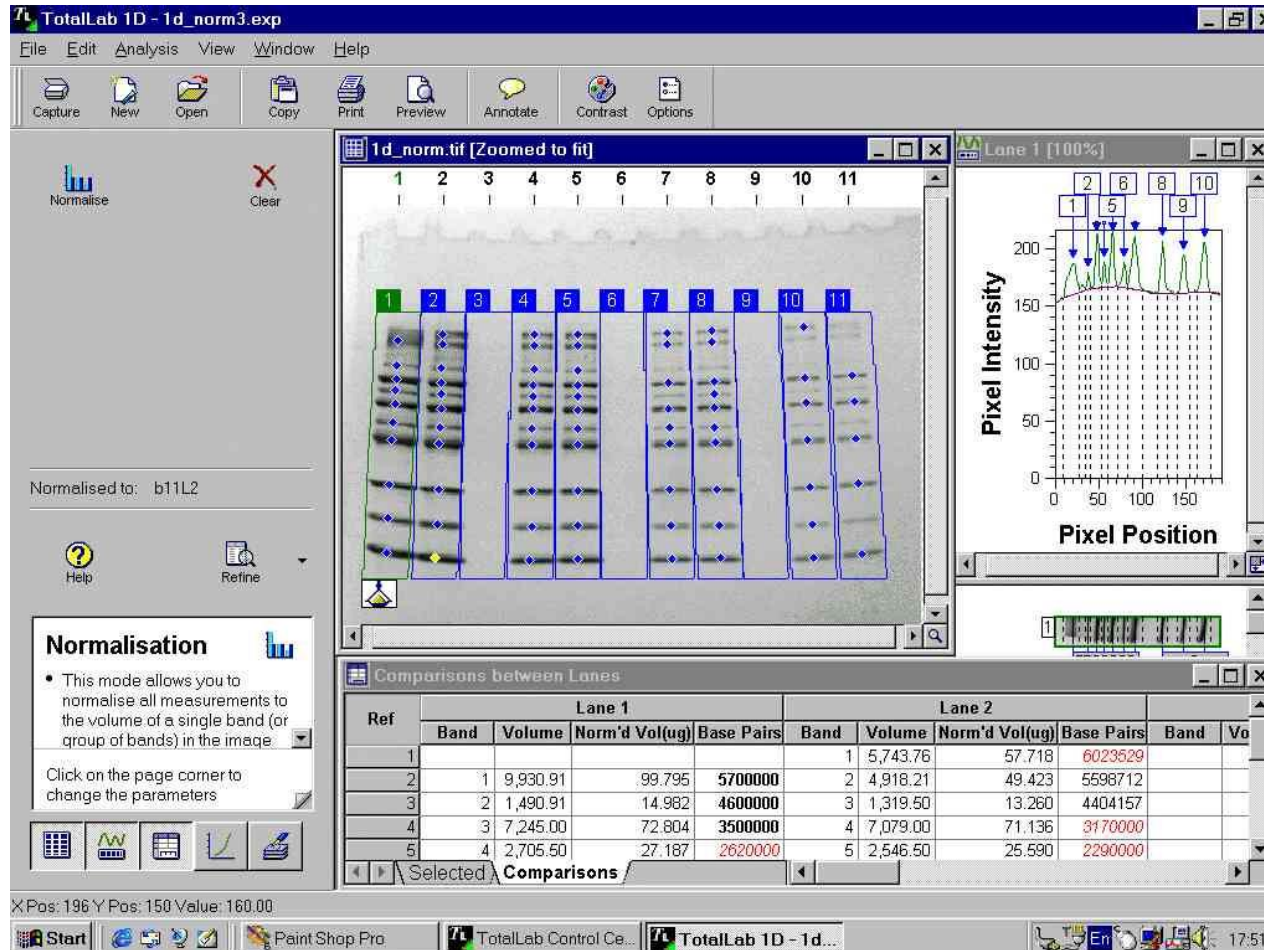

Fluorescence (Epi / Trans)

- UV (EtBr)
- Blue
- Green
- Red
- IR

Digitization (Epi / Trans)

ImageQuant LAS 4000 (GE Healthcare Life Sciences)

Software: Image Quant TL

MAGPIX[®] System (Luminex)

Based on the principles of fluorescence imaging. Lasers and Photo Multiplier Tubes (PMTs) are replaced with Light Emitting Diodes (LEDs) and a CCD camera to deliver a cost effective, compact, and reliable multiplexing platform.

xPONENT® software:

xMAP Technology

Synergy H1 Multi-Mode Reader - (Bio-Tek)

Absorbance/ Fluorescence / Bioluminescence

Synergy H1 Multi-Mode Reader - (Bio-Tek)

Patented Hybrid Technology™ combines flexible monochromator detection (**230 - 999 nm**, 1 nm increment) with high performance dichroic-based detection.

Compatible with **Take3™ Micro-Volume Plate**: samples down to 2 µL volume can be measured. Especially useful when working with precious samples, for fast and accurate DNA/RNA quantification at 260 nm

Dichroic-based filter optics, for best performance and advanced detection technologies such as fluorescence polarization and time resolved fluorescence.

Compatible with the Gas Controller for control and monitoring of CO₂ and O₂.
